VS Code Plugin for Lebab

Lebab transpiles your ES5 code into readable ES2015 (sugar-syntax). It does exactly the opposite of what Babel does.

```
1  a(function (a, b=2, ...c) {
2    ...this.x = 3;
3  }).bind(this));
4
5  a(function () {
6    ...arguments;
7  }).bind(this));
```

Ln 7, Col 15 Spaces: 4 UTF-8 LF JavaScript

Donate

If you want to thank me, or promote your Issue.

[Donate](#) [PayPal](#)

Sorry, but I have work and support for plugins and modules requires some time after work. I will be glad of your support or PR's.

Install

- Press `F1` and select `Extensions: Install Extensions`.
- Search for and select `lebab`.

See the [extension installation guide](#) for details.

Usage

Press `F1` and run the command named `Lebab: convert JavaScript code from ES5 to ES2015`.

Supported languages

- JavaScript

Supported settings

`lebab.transforms`

- Type: Array
- Default: [safe transforms](#).

All transforms are available in the [official repository Lebab](#).

`lebab.skipWarnings`

- Type: Boolean
- Default: `true`

Some transforms generate warnings when they cannot be applied. This option disables these messages.

Keyboard shortcuts

For changes keyboard shortcuts, create a new rule in `File -> Preferences -> Keyboard Shortcuts`:

```
{
  "key": "ctrl+shift+c",
  "command": "lebab.convert"
}
```

Changelog

See the [Releases](#) section of our [GitHub project](#) for changelogs for each release version.
